		2. By engaging in the process of creating a model of early human tools, you can develop a hands-on understanding of the tools' functionality, materials used, and the techniques employed by early humans. Additionally, it provides an opportunity to explore archaeological and anthropological research, connecting you to our shared human history.
		3. Creating models of means of communication provides an interactive and engaging way to explore the history, development, and societal implications of communication technologies. It encourages critical thinking, historical awareness, and an appreciation for the role of communication in connecting people and shaping human civilization.

SEWA Project

"Our school is organizing a community project to support local wildlife. As part of this initiative, students are encouraged to place water pots for animals and scatter grains for birds on the road near their homes. Your task is to take a picture while you engage in these acts of kindness. How does providing water pots and grains for animals and birds contribute to the ecological balance and biodiversity in your surroundings?"

Learning Objectives

1. By doing this students actively participate in creating a more ecologically balanced and biodiverse environment. This act of kindness ensures that animals and birds have access to essential resources for their survival.

2. It supports the well-being of stray animals and other wildlife by offering them a readily available water source when natural sources might be scarce. Additionally, scattering grains for birds provides them with nourishment, especially during seasons when food may be less abundant.

3. Students demonstrate their commitment to the well-being of local wildlife and the conservation of biodiversity.
